LUTS　　平面设计
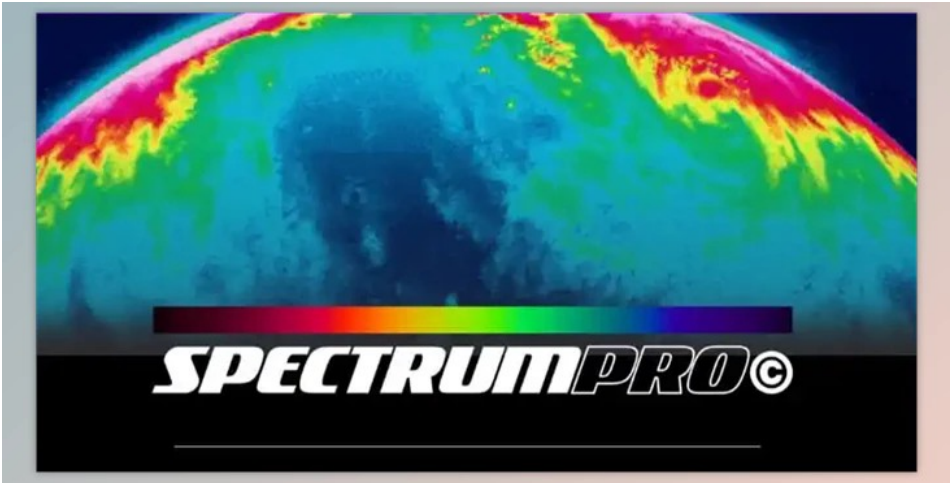

FredPelle – SPECTRUM PRO:

Recolor textures and videos with a single click!

You can unlock the full potential of color that is hidden in your footage and textures by simply dragging and dropping of a LUT. You can be sure that whatever you show it to will be a hoot!

There's no need to layer 10 effect layers to achieve this effect any longer! Drag and drop the LUTs over the top of your footage and you're done!

Simple to make use of

The spectrum not only works in videos but it also works in photographs! All you graphic designers are now able to ride through the hype of thermography!

Works with anything

No matter if you're working with your phone or computer editing photos or videos or videos if your program allows LUTs (Which the majority of them have) the Spectrum is all you require.

compatible with every software

The LUTs heavily depend on the color of the source media to produce distinctive results every time you throw anything at it! There are no more filters that look generic!

Compatibility

The entire look is contained into .CUBE LUTs files, which is why they're compatible with the most popular editing software.

Includes Premiere Pro, After Effects, Photoshop, Lightroom, Final Cut Pro, Davinci Resolve, Sony Vegas, Avid Media Composer, Filmora, Luma Fusion, etc...
