HdrSoft PhotoMatix PRO 7.1.2 BETA 1 (WIN, MAC-7.1):

Photomatix Pro gives you all the tools necessary to create HDR photographs and then adjust them in the way you prefer from realistic to artistic.

- 6 HDR designs and more than 70 HDR settings
- Automatic alignment of hand-held images
- Advanced ghost removal
- Tools and presets to help with real estate photography
- Batch Processing

How to use the Draftometrics watermark tool?

You can use "HdrSoft PhotoMatix".

Where can I download the product?

After subscription, You can download it for free from here.

Batch with Preview

This feature interactive lets you look at a preview of each HDR image prior to making bracketed images in batches. You can also alter the image's quality by applying an alternative preset and HDR setting. This is especially useful for processing images of subjects with different lighting conditions.

Save Ghost Removal Mask

You'll be able to save areas you've marked to be deghosted within the screen for selective ghost removal. This is helpful in situations where you have to combine similar bracketed images. This also lets you utilize Ghost Removal Mask to do batching.

Custom Watermark Tool

You can now apply your own text watermark on images using the brand-new watermark tool. It includes options to choose the font, size of the watermark, layout, and location for the watermark.

Save HDR Images as 32-bit DNG

Version 7 allows you to save HDR pictures in DNG format, and 32-bit DNG for the merging HDR image. This allows you to modify your HDR images further using Photoshop and other image editing applications.
