After subscription, You can download it for free from here.

What is 80 Film Lightroom Presets By EzDigitals?

Film Lightroom presets are pre-configured settings in Adobe Lightroom, a popular photo editing software, that are designed to mimic the look and feel of various film types. These presets apply a series of adjustments to your digital photos to make them resemble the characteristics of specific film stocks or to achieve a particular film-inspired aesthetic.

Film Lightroom presets can be useful for photographers and enthusiasts who want to achieve the distinctive appearance of analog film photography in their digital images. They can recreate the color tones, contrast, grain, and overall style associated with classic film types like Kodak Portra, Fuji Provia, or black and white film.
