Digital Anarchy – Flicker Free v2.2.9 (Win): Flicker Free is a dependable and easy method to eliminate any flickering from your footage. There are presets available for various kinds of footage, which makes it simple to get rid of flickering caused by cameras that aren't in sync and time-lapse or slow-motion video. Flicker Free works with any size of footage and is compatible with various video editing programs, including After Effects, Premiere Pro, FCP, Avid, Resolve, and Vegas.

Get rid of all LED lighting, Time Lapse, and many more.

Flicker Free was initially developed to remove flickering Time-Lapse. However, it also works amazingly well with different types of flicker. The most frequently encountered issue is lights and cameras being out of sync, which results in moving bands. It can also be caused by flicker from fluorescent or LED light sources, Slow Motion (high speed) footage, Drone footage, and much more.

Simple Deflickering Presets

We aim to design an intuitive program that delivers outstanding results while remaining incredibly simple. Flicker Free has presets that can be used for flickering videos and just a handful of parameters that need to be adjusted. The presets for de-flickering don't work as they should. You'll be amazed by how fast you can repair flickering in the video that necessitates a new shot.

Motion Compensation

Flicker Free utilizes the optical flow algorithm (what's employed for retiming footage) to recognize and distinguish independent moving objects even in the presence of Motion from the camera. Suppose you're shooting with Motion or lots of Motion in the footage. In that case, these integrated motion-estimation algorithms effectively fix poor-quality video or footage previously inaccessible to repair.

GPU Acceleration

TRemovingflicker from your footage requires us to request lots of images from your host application and examine all the color information in the frames. This could take up to a minute or two, mainly when dealing with more extensive 4K footage. Flicker Free 2.0 dramatically accelerates GPUs' performance by over 300% over the prior version.
