Noemax FastInfoset.NET v18.14.5339.0 + CRACK

2024-12-18 23:02:00   label 我要反馈   下载页面

FastInfoset.NET provides a very compact and broadly interoperable encoding of the XML Infoset incorporated into the XML processing API of .NET and can be just as straightforward to use as the system-provided text encoding.

FastInfoset.NET Reduce XML dimension with this ultra-compact, interoperable, standards-based binary encoding.

Noemax FastInfoset.NET Amazing Attributes:

Enables you to cut back XML size overusing the Binary XML encoding of .NET or simply by controlling the text XML encoding of .NET.

Fast Infoset is a binary encoding of the W3C XML Information Set, which the ISO and ITU standardized.

FastInfoset.NET has passed all interoperability evaluations done by fi-interop and other Java, C/C++, and C# implementations of Fast Infoset.

You're able to change from the system-provided text to the Fast Infoset encoding with almost no changes on your own code.

Encoding and decoding could be completely schema-less, helping you to decode FI files of unknown construction.

It is simple to convert the text to the Fast Infoset encoding and back into the text encoding without losing info.

Quickly encodes binary data like graphics, videos, and other opaque objects in their native format without turning them into a text-based format.

It contains a message shredding for WCF that really does miracles by generating more streamlined messages than any system-provided encoding for WCF.

Available for .NET, .NET CF, Xamarin.iOS, Xamarin.Android, Xamarin.Mac, Windows Phone, Xbox, Silverlight, Mono and as PCL.
