Aescripts – Infographics Toolkit 1.04 for Afte Effects: Temporarily disabled, until compatibility issues are resolved. After Effects' complete toolkit for infographic creation

Infographics Toolkit provides a complete solution to creating infographic presentations using data. You can create beautifully animated charts from any spreadsheet source or directly input data. There are many templates styles available with many free in-app updates. These include smooth transitions and intro logo animations. The "Automatic Final Builder" feature makes it easy to adjust the final presentation.

Unique Styles

Each style was created to be different. The colors change, but not only the colors. Chart animations and the intro/outro are also different.

Professional Logo Intros

You can also use the professionally animated logo intros and outers in each style for other projects.

Expression driven

Infographics Toolkit Toolkit uses dynamic hyperlinks to automatically set up "Theme Lanes" for each Logo Intro, Logo Outro, and Chart. The "Theme Layer" allows you to modify the entire design, animations, and chart values in minutes. No need for keyframes or editing expressions!

Organized and well-organized

Infographics Toolkit organizes your Adobe After Effects Project Panel files so that you can manipulate the template exactly the way you want it.

Automated Final Builder

One push and you're done! **Final** Infographics Toolkit will automatically assemble your final composition for you, so there's no need to waste time. Your final composition will include a Logo Intro and all your charts, as well as a Logo Outro and smooth transitions. To rebuild your final composition in a flash, just click on "Build Final" whenever you add or delete a chart.
