Blender Market - House Craft is a versatile tool for creating detailed buildings, houses, and even entire villages, with features tailored for architectural visualization, VFX, and creative projects.

It offers customizable options for adding windows, chimneys, doors, porches, and awnings using color-coded face assignments (e.g., Purple for Windows, Yellow for Chimneys). Users can randomize or precisely position elements and choose between multiple styles for windows and doors.

HouseCraft also enables realistic destruction effects with three damage types: Random Damage (light wear to aged destruction), Vertical Damage (from roof to floor), and Proximity Damage (localized destruction using Empty objects). These effects can be combined or used separately.

The add-on includes a feature for adding ivy to buildings, enhancing scenes with natural or post-apocalyptic aesthetics. Parameters like ivy density and height are fully customizable.

HouseCraft provides an intuitive solution for creating dynamic and visually compelling structures, with tools for both construction and destruction.
