Blender Market - Wear N' Tear Pro:

The add-on allows users to achieve realistic wear and tear effects on their models by selecting either the Wear N' Tear HP (High Poly) for realism or the Wear N' Tear LP (Low Poly) for a stylized appearance. It offers the flexibility to erode models individually or multiple objects at once, including processing entire walls without the need for separating individual bricks or stones, providing fast real-time responses. Users can restore their models fully or partially as many times as needed, eliminating the necessity for non-destructive workflows. Advanced features include adding mortar between bricks or stones, covering models with plaster, creating landscapes, cutting cracks, and simulating realistic debris with other integrated tools. This makes it a comprehensive solution for damage control and model creation.
