Aescripts Save Actions v1.4: Save and recall actions within After Effects. A simple and practical tool for storing layers that has the capability to save the characteristics of layers over time or selectively using live preview.

- This tool lets you quickly make any layers save.
- Select your layer, and then, after reviewing your layer's properties to determine storage, save the layer by displaying it in a live preview.
- As mentioned above in the previous paragraph, the properties of layers can be saved.
- If the layer is selected all the characteristics of that saved layer will be applied to the layer selected when applied, but if there is no layer selected the saved layer and all of its characteristics are created within the present composition.
- You can backup your saved files and then make use of them again later.
- Includes a free upgrade package that includes dozens of pre-made layers and pre-sets.
