AccuFACE Profiles v1.0 RTX for iClone introduces a groundbreaking AI facial tracker powered by NVIDIA RTX GPU, revolutionizing facial animation in iClone.

How to create animation from video files?

You can use "AccuFACE Profiles" to create an animation of your face.

Offering unparalleled accuracy and versatility, AccuFACE captures precise expressions from webcams and video files, setting a new standard in animation.

Key features include real-time facial tracking, live webcam support, recorded video compatibility, remote collaboration, calibration for accuracy, full-spectrum mocap refinement, exact audio matching, and multi-language support. These features ensure seamless integration, ease of use, and exceptional performance for animators and creators.

"AccuFACE Profiles" Samples:

Package information

To fully utilize iClone version 8.33 and above on Windows 10 64-bit or later, ensure your system meets the requirements, including a GPU like NVIDIA GeForce RTX 2060 or higher with driver version 520.46 or above, and a compatible camera capable of 1280x720 resolution at 30 fps or higher. Supported video formats include AVI, WMV, MP4, MKV, and MOV, with necessary codecs for certain formats, while Motion Live functionality is integrated into iClone 8.
