is a handy tool for software developers using Visual Studio. It makes it much easier to create and manage documentation for your code. With just a click, it automatically generates detailed XML comments for your methods and types, saving you the hassle of manually documenting each piece of your code. The tool also ensures your documentation is always accurate and up-to-date by updating the comments whenever you modify your code.

The extension is particularly useful because it allows you to see and edit your documentation as it would appear in the final help file, thanks to its WYSIWYG (What You See Is What You Get) editor. This means you can tweak the documentation and see the results in real time without getting tangled up in complex XML syntax or formatting issues. It also offers the flexibility to convert your documentation into several formats like CHM, MS Help, or web-based documents, making it accessible in whatever form suits your needs best.

SubMain GhostDoc isn't just about writing and maintaining text; it also checks your spelling and ensures that your documentation meets certain coding standards like StyleCop. This helps keep your code professional and error-free, enhancing overall code quality.

Key Features of SubMain GhostDoc :

1. Automatic XML Comment Generation: Automatically create smart XML comments for methods and types with a single

keystroke.

- 2. Visual Comment Editor: You can directly edit your help documentation in a visual editor and see how it looks as you type.
- 3. Documentation in Multiple Formats: Easily convert your XML comments into formats like CHM, MS Help, or web-based documentation.
- 4. Easy Code Documentation Maintenance: Keep your documentation in sync with your code changes automatically.
- 5. Smart Spell Check: Reduce errors by catching spelling mistakes in your comments and code.
- 6. Customizable Templates: Tailor how your documentation is generated with customizable templates for different code elements.
