

JessicaDrossin Looking Glass Presets: Warm Tones Collection

2025-02-10 16:49:48 [label](#) [我要反馈](#) [下载页面](#)

Looking Glass Presets: Warm Tones Collection: Explicitly created for the artist photographer, these presets help balance your photo to reveal the details. They then enhance them with gorgeous warm colors meticulously calibrated to preserve the natural skin tone. Start small and build upon your most loved tones using the Toolkit Presets (\$19 value, accessible in the bundle) to enhance your image and depth. Make basic corrections to your images using Lightroom or Adobe Camera Raw.

Every Looking Glass Set includes presets for BOTH Lightroom (including Lightroom Mobile!) and Adobe Camera Raw, as well as actions to use in Photoshop Creative Cloud, allowing users to work with several different applications. Since these programs perform differently and have different functions, specific presets/actions can be located in different places. Check out the below list. The tones and adjustments to the toolkit are the same from application program to application (for instance, the tones and contrast of "Antique" look the same in LR, ACR, and Photoshop CC). Be aware that these actions are only available in Photoshop CC after you install the ACR presets.

49 Lightroom Presets Total, Including:

- 21 Exposure Balanced, Color-Toning Options Intended for Backlit Photos
- 27 Toolkit Presets Customize Contrasts, Saturation, Details, Sharpening, and Noise
- Multiple Resets Allow Easy Updos
- 46 Adobe Camera Raw (ACR) Presets Total, Including:
- 21 Exposure Balanced, Color-Toning Options Intended for Backlit Photos
- 24 Toolkit Presets Customize Contrasts, Saturation, Details, Sharpening, and Noise
- Multiple Resets Allow Easy Updos
- 40 Photoshop Actions Total (Require Installing ACR Presets), Including:
- 21 Exposure Balanced, Color-Toning Options Intended for Backlit Photos
- 19 Toolkit Actions Customize Contrasts, Saturation, Details, Sharpening, and Noise

Installation of Lightroom cc presets

- **Unzip Your Product File.**

PLEASE NOTE: Many browsers do not do a good job unzipping files. Please use an extraction program (i.e. WinZip) instead of your browser's built-in version if you encounter any issues.

- Once you've uncompressed the zip file, you will find a folder with XMP files inside. These are your new presets! Open Lightroom Classic on your desktop.
- Select a photo to edit. Go to the right top edge of the application window and select the settings sliders icon.
- When you click on it, a window will pop out. In the upper left of this panel, there is a "Presets " button. Click on it to reveal a presets pop-out panel.
- Click the icon and a drop-down menu will appear. Select "Import Presets ". Then simply go to your presets folder and click "Import". The Presets will appear in the dropdown menu.
- The presets folder's name should be the same as the folder name you imported from. Click on the drop-down arrow to see the full list of your imported presets.
- Click on the preset name to see its effect. For newer versions of LR, a slider menu will appear allowing you to lessen or multiply the presets' effects.

IMPORTANT TIP!

No preset does it all! In particular, please make sure to adjust Exposure and White Balance to customize your image. Saturation may also be adjusted to perfect your work!
