

Red Gate SQL Prompt v10.7.2.22957 (02 Jul 2021) Professional Edition + CRACK

2025-01-01 21:58:26 label 我要反馈 下载页面

SQL Prompt simplifies the recovery of database object names, syntax, and snippets as you compose, intelligently offering just appropriate code options. Automated script design offers simple code readability -- especially helpful when working with unknown scripts. SQL Prompt is exceptionally productive straight from the box. It's also customizable so that you can make it function precisely how you want it to. Utilizing SQL Prompt will enhance your productivity and dramatically lower your time on your computer keyboard.

Writing and formatting SQL code by hand, despite IntelliSense, is honestly pretty dull.

We made SQL Prompt Guru, which is not.

Available as an add-in for SQL Server Management Studio and Visual Studio, SQL Prompt Guru strips off the repetition of programming.

In addition to autocompleting your code, SQL Prompt Guru manages formatting, thing renaming, along with other distractions, which means that you can focus on how the code really works.

Red Gate SQLPrompt Great Features:

- Table/View/Column/Sproc name conclusion
- The design makes broadcasts Simple to browse
- JOIN/JOIN ON syntax conclusion
- Expand wildcard to column titles listing
- Item creation-SQL seeing widget
- Mouse-over tool hints That Provide thing definitions such as a useful overview
- Parameter hinting for user-defined functions
- Cross-database questions
- Distributed questions with connected SQL Server examples
- Scripted objects contained in offender listing
- Cursors, cursor variables, and related announcements
- Auto-uppercasing of keywords and pop-up the following key words
- Column selector display and qualify object/column names choice

Save recover lost tabs.

With tab, you can preview, save, and then rename tabs and restore tabs formerly opened in SSMS. It's possible to get work where you left off and start coding in moments.

Tab coloring

Set unique colors for various groups, databases, and servers, which means you can efficiently identify which environment you are working in within SSMS.
