Esri Cityengine v2024.1.10650 (Win): CityEngine stands as advanced 3D modeling software designed for the swift creation of expansive, interactive, and immersive urban environments, surpassing the time constraints of traditional modeling techniques. The cities crafted using ArcGIS CityEngine can either be rooted in real-world geographic information system (GIS) data or serve as a canvas for portraying fictional cities from the past, present, or future. With seamless integrations, bring the potent procedural city generation capabilities of ArcGIS CityEngine into your preferred urban design tools.

"Esri Cityengine" Sample:

Enhanced Export to Unreal Studio (beta):

The CityEngine exporter for Unreal Engine, utilizing the "Datasmith" format, now supports Unreal Studio 4.22, the latest iteration of the renowned tool for real-time rendering in architecture and design. Our updates to the exporter streamline the process of incorporating vast and detailed CityEngine scenes into Unreal Studio. Key improvements include native support for Unreal landscapes to represent terrain elevation data, compatibility with physically based Unreal materials, and enhanced workflows accommodating metadata on meshes.

CityEngine VR Experience Extended to Oculus Rift:

The CityEngine VR Experience, a tabletop virtual reality application tailored for urban planning, has expanded its compatibility to include Oculus Rift. This immersive tool enables planners, designers, city officials, and citizens to submerge themselves in a CityEngine scene, facilitating the exploration, discussion, and modification of potential development scenarios. The integration of Oculus Rift support introduces a new dimension of interaction, surpassing the limitations of traditional computer screens and physical models. Accompanied by numerous new features, improved usability, and extensive documentation, users can now delve into building their own CityEngine VR Experience.
