

CData Drivers for USPS v21.0.7930 (17 Sep 2021) All Platforms + License Key

2024-12-18 23:04:00 [label](#) [我要反馈](#) [下载页面](#)

USPS is described to be the international mail service which has the ability to go to Canada as well as Mexico and also more than 190 countries worldwide. The user has the ability to choose a mail service which is based on the delivery speed or even the price of the shipping. The fastest and the most secure International tracking as well as insurance. It has the ability to connect to the reside of the USPS for process of shipping and tracking the information from the programs that are reporting, databases as well as the custom programs with the help of the standard based drivers.

CData Drivers for USPS Great Features:

The drivers are capable of offering the users with a very fast and secure Way by which the user has the ability to connect to the USPS data along with the business intelligence, analytic tools, as well as the visualization technology. They have the ability to provide a query performance to the user which is unmatched, as well as the comprehensive access to the source of data along with the metadata, and also to provide the seamless integration in order to integrate with an analytic tool of the user. The business intelligence as well as the reporting tools are capable of offering a rich support for the process of interaction with the databases that are relational. They have the ability to include the connectors that are either too slow or even too limited sometimes. The connectors extender favorite application and tools of the user along with the live access the best source of data which is established standard just like that ODBC, JDBC and a few more. It should be noted that they have the ability to provide and deliver a comprehensive access to the source of data as well. USPS has the capability to provide and integrate with the reporting food as well as the business intelligence just like the Microsoft power BI, Tableau, Qlik and a few more to be mentioned.

The process of ETL basically means extract transform and load. The adapters and the drivers are capable of extending the ETL tools of the user with the connectivity of the USPS easily and flexibly and hence the USPS integration solution is capable of providing a reliable, secure as well as robust data movement to the user and the developer. Connecting to the data warehouse or even the RDBMS in order to facilitate the process of operational reporting, offloading the queries as well as increasing the performance of the user and at the same time supporting the governance of the data along with its initiative, and last but not least archiving data for the process of disaster recovery and a lot more.

The process of data management can be successful by the support of the popular database protocols just like the ADO.NET, ODBC as well as JDBC for the users along the way to the wire protocol interfaces for the server of SQL and MySQL. It has the ability to connect to the USPS data from the huge range of the management application of the database which is present.

In the workflow and automation tool process it permits the connection to the USPS from the payment data migration, tools of the BPM and finally the ESB. The drivers and adapters are able to provide a very straightforward access to the data of the USPS from the application just like the SQL SSIS, Microsoft flow, Power apps and a few more to be mentioned.

It is considered be the easiest way for the user in order to integrate with the data of the USPS from anywhere that the user desires. Drivers are offering a date eccentric model for the data of the USPS which has the ability to dramatically simplify the process of integration and permits the users and developers in order to create a higher quality application which will be better in quality and speed compared to the previous ones.

The data virtualization process basically means that the drivers provide a virtual database abstraction which is located on top of the data of the USPS and it has the ability to support the famous data virtualization as well as the pictures just like the query Federation, predication of the push down, as well as the delegation of the query.

This package includes the following components:

- Excel Add-In for USPS v21.0.7930
- USPS ADO.NET Provider v21.0.7930
