What is Light Leaks Photo Overlays?

"Light Leaks Photo Overlays" refer to digital elements or effects that simulate the appearance of light leaks in photographs during the editing process. Light leaks are accidental or intentional exposure of the film to light, resulting in colorful streaks or flares in the image. In the digital realm, these effects are often recreated to add a vintage, dreamy, or ethereal atmosphere to photos.

These overlays typically consist of transparent images with vibrant and dynamic patterns, which can be superimposed onto photos to create the illusion of light leaking into the camera. Photographers, graphic designers, and other creative professionals use light leak overlays to enhance the visual appeal of their images and evoke a nostalgic or artistic feel.
