Aescripts Responsive Tools:

The **Responsive Tools** Toolkit offers features for making objects and compositions adaptive and responsive, particularly for text layers. It includes four auto-adapting modes (Comp, Layer, Target, Size) to adjust text layers dynamically. Users can lock anchor points at nine different positions and secure layers to eight points within the composition, ensuring responsiveness without needing extra layers or altering existing animations. This toolkit enables efficient layout adjustments while preserving the integrity of the original design and animation. Additionally, it supports handling both images and GIFs, enhancing flexibility in multimedia projects.
