Aescripts AEP Version Updater v1.6.3 (Win, Mac): Automatically Open and Update AEP Files to the Latest Version in Batches. Did you know that older AEP projects may face compatibility issues with newer After Effects versions? Ensure they stay relevant with just one click!

How to open and update AEP files to the latest version in batch?

You can use "Aescripts AEP Version Updater".

Where can I download the product?

After subscription, You can download it for free from here.

Usage:

- Choose between the Folder or Files tab to update selected AEP files or an entire folder.
- Select AEP files or a folder containing AEP files.
- Start the updating process with the second button.

Additional Options:

- "Include subfolders" to process AEP files in subfolders.
- "Overwrite original AEP files" to overwrite original files or uncheck to generate new files with a custom suffix.

How it works: The script will sequentially open, save, and close all selected AEP files, updating them to the same version as your After Effects installation. Save time and avoid the manual, delicate, and tedious process with just one click.

Known issues:

- AEP file conversion time varies but is comparable to manual processing.
- Incompatible items won't be modified, and new AEP files won't be created.
- Dialog boxes warning of missing plugins are automatically ignored.
- Dialog boxes from some third-party plugins may require user confirmation.
- AEP files from ancient versions will only open if your After Effects installation supports them.
- The progress display may have visual bugs in After Effects 2024, but the process usually runs.

- Simple one-click interface
- Batch conversion updating for multiple files or entire folders
- Option to keep or overwrite original files
- Custom suffix addition for updated files
- Detection of incompatible files, such as corrupted or too-old versions
