Aescripts Cropdragon v1.0.1 (Win, Mac)

2025-02-10 16:51:03　　label 我要反馈　　下载页面

Cropdragon is a Premiere Pro extension designed to simplify cropping along the alpha channel of clips using the standard "Crop" effect. It automates the process, enabling quick adjustments to top, bottom, left, or right based on the alpha channel. Users can crop in forward or reverse order, reset values to zero, and enter precise numeric values with support for arithmetic operations. The extension also includes linking options to apply consistent crops to multiple sides and supports adjustments in both pixels and percentages. Additional features include a reset button, horizontal/vertical flip, and customizable layout settings with color options.
