

Quest Software LiteSpeed for SQL Server v9.0.0.31422

2026-04-08 09:05:02

Quest Software LiteSpeed for SQL Server assists companies in restoring and backing up SQL Server databases within a shorter time with significantly reduced storage. It is created to ensure that your data is never compromised, recovery is quick, and access is available whenever you need it the most, without making it take long and perform complex procedures.

LiteSpeed reduces the cloud storage expenses, in collaboration with Quest QoreStor, by smart compression, deduplication, encryption, and cloud tiering. It implies that you store less information, spend less to store your information, and yet, you have your backups safe and fit to the current security standards.

Quest Software LiteSpeed for SQL Server also provides DBAs with confidence and control in expanding the SQL Server environments. With the same central dashboard, teams are capable of managing the backups, checking their integrity, and restoring anything within a complete database into a single table or transaction- without interfering with production systems.

Key Features of Quest Software LiteSpeed for SQL Server:

- High-Speed Backups and Restores:** Back up and restore SQL Server databases much faster than native tools, reducing downtime.
- Storage Efficiency:** Advanced compression and deduplication reduce backup size and cloud storage costs.
- Encrypted Backups:** Protect sensitive backup data with strong encryption to reduce security and compliance risks.
- Centralized Management:** Manage backup and recovery jobs for multiple SQL Server instances from one location.
- Object-Level Recovery:** Restore individual tables or objects without needing a full database restore.
- Transaction Log Reader:** Recover specific DML or DDL changes, or roll back critical transactions quickly.
- Backup Verification:** Verify backup files without restoring them to ensure they are not corrupted.
- Backup Templates:** Create standardized backup strategies and deploy them across environments in seconds.
- Dashboard and Reporting:** Get visibility into backup and restore activity with clear dashboards and easy re-execution options.
- Job Management:** Create, edit, and monitor SQL Agent jobs and Windows tasks through the LiteSpeed Job Manager.
