3DF Zephyr v7.531 (Win): 3DF Zephyr Free is the latest edition to the 3DF Zephyr Family: sharing the same technology as its predecessors, and this version is accessible for private use. 3DF Zephyr is a free photogrammetry software for everyone.

You can use 3DF Zephyr for any personal usage, and it is also possible to share this version with your customers who might want to open your .zep files created with 3DF Zephyr Lite Pro, Aerial, or. This means that 3DF Zephyr Free can not process more than 50 images. It's still an excellent viewer and ideal for anyone who wants to learn photography without using time-limited trials.

You can also utilize 3DF Zephyr Free to process smaller data sets while your primary license is in use. You can also use 3DF Zephyr Free to master the fundamentals in 3DF Zephyr before moving on to more comprehensive versions.

3DF Zephyr free can have up to 50 images sufficient for simple subjects and the initial few tutorials. It also allows only 1 NVIDIA card to accelerate the processing. The exporting and editing capabilities are limited (for instance, you can only export your textures in JPG formats). They are missing crucial tools (for instance, the custom UV mapping software). However, 3DF Zephyr Free isn't time-restricted, and it can play any .zep file created by any different 3DF Zephyr versions.

BEYOND 3D MODEL

True orthophotos are available, including Digital Terrain and Surface models (DTM, DSM), statistics, and reports on projects. Draw CAD-like drawings and create sections, contours, and path lines.

Do anything. After that export your data in the format that is suitable for your needs most.

- Automated Structure based on Motion
- Global & Incremental pipeline
- Easiest Camera calibration management
- Add photos anytime
- Dense cloud generation
- Reconstruction using presets
- Advanced settings
- Custom settings
- Texturing in mesh
- Multi texturing and the UDIM
- Tools for editing
- Filters, hole filling, and photoconsistency
- Mesh filtering using the selection
- Full 360deg cameras support
- Direct Sketchfab upload
- Smartsnap and video-making
- Direct YouTube upload
- Capabilities to mask
- Pictures are crucial
- Video Import
- CUDA (r) computation
- Exporting
- Native Laser Scan capability
- Photos and quality evaluation
- Volume of Interest

- Multiple layers support
- Match viewer
- Normal and displacement maps
- Planar texture reprojection color
- Point Cloud / Mesh import
- External UV mapping
- Unity ArtEngine Integration
- Registration of Multi-ICP
- Workspace is merged
- Processing in batches
- Fixed rig support
- Automatic marker detection
- Automatic sphere marker detection
- Analysis of statistics and report
- Measurements, control points, and volumes
- Volume projection
- Hollow volume computation
- Projection of a grid
- Point cloud tool for comparison of cloud
- Shape From Silhouette
- Orthophoto & Orthomosaic
- Orthophoto Editor
- Drawings in CAD
- Automatic extraction of polylines
- Contour lines generation
- Sections and Track sections
- Multispectral Viewer and DEM
- DEM profile
- EXIF GPS coordinates
- Preview of GPS EXIF
- PCS georeferencing support & conversion
- And much more
