BlenderMarket - Easy Smoothies 1.0.0: The fastest method of smoothing the surface of many objects

An easy way to Shade flat smooth or to use Subdivision Modifiers with custom settings for many objects

With just one click, you'll be able to:

- Apply Shade Smooth to the selected object("A" shortcut for selecting all objects, if required). (If the Autosmooth button is selected, the identical amount that is Autosmooth will also be applied to the selected objects!)
- Apply Flat Shade to selected objects.
- Add 3 - Add a Subdivision Surface Modifier on the selected object based on the viewport and render options.
- Subdivision Surface Modifiers on the selected objects
- Easy Smoothies was created to be simple and user-friendly
- If you find any bugs or bugs, please message me via my profile on the Blender Market.
- Change objects in the same smoothness simultaneous speed (even with 1000 objects)
- It is helpful if you wish to render with high quality (with a subdivision mod); however, work in low-poly (like Disney/Pixar does !)
