Geo Sign (Sign Generator Addon) V1.03 for Blender offers a seamless solution for creating a variety of signs with ease. With GeoSign, users can effortlessly generate diverse signs without navigating through complex processes.

How to design and create neon lights and moving signs?

You can do this design using "Blender - Geo Sign".

Where can I download the product?

After subscription, You can download it for free from here.

This Blender addon, compatible with version 3.4 and above, enhances your workflow by offering a versatile range of features for creating signage in both Cycles and Eevee renderers. While Cycles is recommended for optimal results due to Eevee's limitations, the addon provides convenient access to a library of over 1000 sign text assets, animated signage capabilities with Neon Shader support, and effortless transformation of media into screen signs. Despite potential issues with certain materials in Eevee, the addon aims to address performance concerns and offers alternative solutions. Additionally, it facilitates the creation of custom sign text and neon-light shapes, providing flexibility and ease of use. An experimental feature for creating neon signs using SVG is also available.
