is basically an extremely accurate as well as a highly effective programmer library that has the capability to distinguish 1D as well as 2D barcodes for the users and developers from the digital pictures as well as bitmaps that are available. It has the capability to apply the SDK and the user can incorporate the barcode recognition performance in the application solution easily and the following image formats are being supported in each such as JPG, BMP, TIF, PNG, and even PDF which stands for portable document format. The distinctive as well as the Speedy recognition of the barcode as well as the algorithm has the ability to find as well as distinguished barcodes from the pictures irrespective of the orientation as well as the position. Barcode reader has the ability to yield a number of barcodes that are utilized for each and every requisite to research as:

- Barcode string
- Barcode type
- Barcode angle in a degree
- Barcode location which can be start or even a stopped coordinates of the bar.
- Page number
- Properties that are associated with the specific recorder
- Error correction level
- The quantity of the mistakes that have been corrected
