Color Cone standalone provides the following added features:

3D LUT export, handover of appearances Into Unlimited Filters, histogram, RGB-clipping overlay along with a preset direction.

Color Cone is a wholly new concept for colour correction in addition to the production of appearances. This program is powerful in addition to intuitive and it can deliver remarkable results with a couple of clicks. **Color Cone** is predicated in an HCL--a colour model that's visualized in the kind of a bicone (that has also given **Color Cone** its title). The HCL-- the colour model isn't quite as common or as prevalent as for instance the HSV version but far more acceptable for picture editing. It gives several benefits since highlights and shadows have hardly any chroma in this color version. 100% black and 100% white normally don't have any saturation even when other versions allow for it. Even equal colors in a variety of places since they happen in the upper and lower portion of a color cylinder are excluded in the HCL-model. Additionally, you can then restore and fix skin tones whenever they had been tinted unintentionally.

Through a smart transformation From the origin into the goal colors with Picture Instruments' own Shade Warp technology even extreme changes in color even in 8- bit images can nevertheless seem very smooth.

Enough of this concept!

To make a look correct Colours you may specify a couple of factors. Each one of those points has an origin and a target color value in addition to a radius specifying how good the effects ought to be in the surrounding colors. This manner very particular edits can be achieved with a tiny radius whereas a larger radius can help you make a desirable atmosphere in a picture. To prevent blending or canceling out the effects of many control points by overlapping, **Color Cone** includes a useful automated radius function.

It is very difficult to put keywords How well this really works. So why not download the evaluation version of **Color Cone** right now and make a wonderful look now.

Review:

- Developing a look
- Color correction
- Color Warp technologies for easy transitions

- Color grading for videos
- Reconciling Mixed White Balance Scenarios
- Subsequently restoring and correcting skin tones
- Auto-Radius function
