Aescripts Neural Enhancement Suite V1.5.8 (Win): Introducing the Neural Enhancement Suite, a groundbreaking A.I.-powered toolset for video enhancement in After Effects, pushing the boundaries of what was previously achievable.

Compatibility:

- Neural Enhancement Suite runs seamlessly on After Effects 2022 and above. Before purchasing, we recommend testing compatibility with your configuration using the free trial.

Limitations:

- While GPU mode is available, it may not be as stable as the CPU mode. For Windows users, an Nvidia graphics card is essential for the GPU version of the plugin.

Experience a new era of video enhancement with the Neural Enhancement Suite. You are unlocking advanced features to elevate your visual storytelling.

- Denoising: Recover intricate details from excessively noisy videos with advanced denoising capabilities.
- Hint-based Colorization: Effortlessly colorize still images using minimal color hints. These images can then serve as reference frames for coloring dynamic shots later.
- Example-based Colorization: Achieve colorization or grading based on example images, providing a powerful and intuitive way to enhance your footage.
- Superresolution: Employ two cutting-edge models, allowing for an impressive up to 16x pixel enhancement.
- Low-light Enhancement: Enhance underexposed images without sacrificing contrast, ensuring optimal visibility in low-light conditions.
- HDR Remapping: Recover lost details caused by high contrast in images, revitalizing the visual richness of your footage.
- Deblurring: Mitigate and eliminate motion blur, ensuring crystal-clear visuals.
