Aesweets RGB Split v1.0.0 (WIN, MAC): Aesweets RGB Split is a simple tool that lets you create a retro-looking, glitchy effect by segregating the green, red, and blue channels. With the RGB Split plugin, you can adjust the quantity and direction of each channel's displacement, allowing you to create various glitch effects ranging from simple to severe. By manipulating these parameters, you can create effects such as motion trails, chromatic aberration, and a sense of fragmentation or disintegration.
