Java & ActiveX   Components

DesigniteJava is basically considered to be a code quality evaluation instrument which is available for the code which is written in the Java for the users and the Developers. It has the capability to detect a lot of designs, and also execution of the aroma that has the ability to rebuild maintainability of the issues that are located within the tested code. Additionally, it has the ability to compute a lot of generally used object-oriented metrics and it is capable of helping the user in order to   reduce the technical depth and also to enhance the maintainability of the user on software. The Enterprise variant of the DesigniteJava does not only affirm the attributes which is supplied by the community variant, but also, it includes the additional features just like the support in order to discover the architecture aroma. Other developments basically include the reason behind the odor that plays a considerable and important part in order to comprehend the reported order, and also has the capability to take corrective actions along with numerous stability improvements and also has the capability to fix the bugs in contrast to the community variance which is available.

DesigniteJava Enterprise Edition Great Features:

It has the following features that attributes that are stated as below such as:

- The architecture color is all about the DesigniteJava that has the capability to find the 7 scents right during the design time granularity that can affect the maintainability of the user application and its architecture.
- The design colors   are basically DesigniteJava which is capable of finding 18 design scents that break object-oriented layout principles that are available.
- Implementation of the scents is the DesigniteJava that has the capability to find 10 implementation scents in order to maintain the application of the user and make it readable and not just as complicated.
- Metrics has the capability to simplify the object-oriented layout that are very useful in order to evaluate the structure of the health of the software for the users.
