Aescripts ft-Lens Distortion Bundle v1.0 (Win):

The **ft-Lens Distortion Bundle** by François Tarlier is a comprehensive toolkit for managing lens distortion and vignetting in After Effects.

It simplifies the process of undistorting live footage and applying the correct distortion to CG elements, all within one application.

The bundle includes **ft-Lens Distortion Pro**, which offers quick lens distortion correction and creative effects like chromatic aberration, and **ft-Vignetting Pro**, which provides detailed control over vignetting, including shape, size, feathering, color, and noise.

This bundle enhances workflow efficiency by eliminating the need to switch between multiple applications for distortion tasks.
