

Particles Elegant Logo (Videohive 30458322) - AE Project

2025-02-10 17:07:58 label 我要反馈 下载页面

How to design a logo with an elegant look through patterns?

You can do this design using "Particles Elegant Logo".

Where can I download the product?

After subscription, You can download it for free from here.

- 1920×1080 30fps Total HD, HD
- CC & over
- Duration: 9 sec.
- Trapcode Particular 4.1.4 plugin required
- Simple customization - dip into your emblem And hit leave
- Tutorial included

What is Particle's Elegant Logo?

A "Particle's Elegant Logo" typically refers to a logo design that incorporates particles, often in the form of small, decorative elements or patterns. These particles could be dots, stars, or other shapes that add a sense of dynamism and sophistication to the logo.

The term "elegant" suggests that the design aims for a refined and tasteful appearance, possibly using sleek lines, subtle colors, and a balanced composition. Elegant logos are often associated with simplicity, clarity, and a sense of upscale or high-end aesthetics.

In the context of a "Particles Elegant Logo," the use of particles can add a unique and modern touch to the design. The particles might be arranged in a way that creates a sense of movement, depth, or texture, contributing to the overall visual appeal of the logo.

Here are a few instructions that will help:

Folder "1. Render"

Open the layer property "CONTROL" in the "Final 1080p" composition. Here you can easily replace the parameters.

2. Logo and Subtext

Here you can add your Logo and Subtext. Drag your picture into the comp, then resize it

3. Change position for Flares

Render your video

Open the "1. Render" folder and Double-Click on the "Final 1080p" for Full HD video or "Final 720p" for HD video. to open it in the timeline.

After that, go to Composition – Add to Render Queue and the Render Queue will open in the timeline window with the new Render Job added to it.

Make sure the Render Settings are set to Best Settings. Click on whatever is written right to the Output Module and a new window will open up. In that window, you can change the codec and file format. Also, if you have used sound in this project,

After Effects

make sure you activate Audio Output at the bottom of that new window. Else your video will be muted.

Last, click on whatever is written right to the "Output to" text and set the folder where you want your video to be saved.

When you have set everything to your needs, click Render and wait for it to finish. Depending on the project as well as your computer specs, this can take some time.

Recommendation:

1. Include in the program settings option "Disk Cache". (Edit - Preferences - Media & Disk Cache. Check the box "Enable").

Select the disk on which there is a lot of free space. Set Maximum Disk Cache Size.

2. Go to the tab "Memory & Multiprocessing". Check the box next to "Render Multiple Frames Simultaneously, and move the slider until the end to mark Faster Rendering.

3. Restart After Effects.

4. Before rendering close the preview window.

5. Switch off additional programs such as an antivirus and firewall.

At that time while there is a process rendering, it is desirable not to use the computer.

In other cases speed rendering will depend on a complete set of your computer and a video-format choice.
