

Compositenation Oniric Glow Generator v1.2.0 For Photoshop (WIN, MAC)

2025-02-10 16:41:02 label 我要反馈 下载页面

Generate bloom effects are among the two key characteristics of Oniric. It employs an inverse square law the same as the real light falloff to provide extremely smooth light-to-light transitions. When combined with our algorithms, it performs amazing using its "colorize" feature. When you click the "apply," "apply" button, Oniric renders the bloom in 16 bit which means you don't need to be concerned about bands.

Making light streaks is yet another key characteristic of Oniric. By using this kind of glow, you can create extremely interesting and imaginative lighting effects that you did not think of before you took your photo. The lens can be used to create flares and glares, too. We've made tutorials that teach you how to create these effects, and the rest is exploring settings and discovering more methods to create.

Nondestructive

We've developed a plugin that provides non-destructive results. This means that the plugin won't cause damage to your pixels, and allows you to modify your Oniric elements at any time you'd like and then change the settings again and repeatedly.

When you press "edit mode", Oniric searches for all your Oniric elements already built and allows you to select which element you wish to modify.

SOFTWARE COMPATIBILITY

- This plugin is compatible only with the latest versions of Adobe Photoshop CC 2018 and above.
- The plugin is compatible with Windows and macOS.

System requirements

- The plugin is just as Adobe Photoshop can on your personal computer. So when Adobe Photoshop is quick and the plugin is, then it will be speedy. We have optimized our tools to function at the speed they can in the event that they're not GPU already.
- However, we've noticed that the plugins work better in the version CC 2018, and CC 2019.
