- **Bug fix:** Addressed the issue of missing files within the "Complex" category.

## How to use The Streamer:

#### Important notes:

- At this moment The Streamer works only in Ater Effects CC 2014.2 and above.  
All projects in this pack have the same structure. So, we will show you how to use one project, but with all other projects, you should do the same changes and get the same results.  
After you choose a necessary project in the extension panel, you need to click apply and this project automatically will be exported in the timeline.

At the same time, you will see Motion Bro Folder in the "Project" panel is created. In this folder, you need compositions that are in the // Assets.

Open these compositions to change the main text, images etc. Depends on what project you choose; these compositions can be different but all-important compositions always will be in this // Assets folder.

Also, you can open the main imported composition and select the layer "Color Adjustment" and change extra settings. Usually, it is color settings but also it can be something else, for example, turn on/off black and white filters.

Change settings, combine different elements, or if you have basic skills in After Effects, you can open compositions in the folder "Materials" and custom projects as you want.
