Tools   Applications
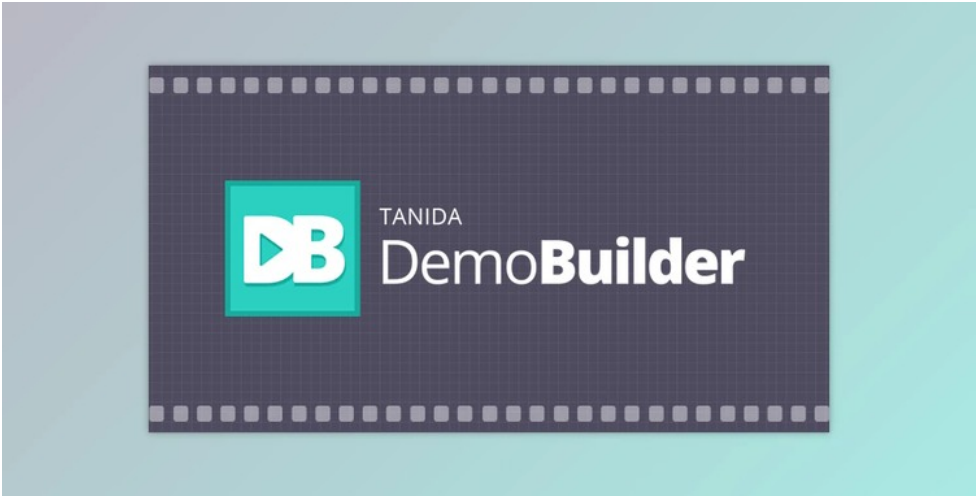

Demo Builder lets you create professional, eye-catching interactive presentations without any programming knowledge. It has a simple interface that takes only minutes to learn.

Tanida demo Builder is an intuitive program that comes with tools to create interactive videos and tutorials.You don't need programming skills to use it. It is easy to learn and can be used by even the most novice users.

The program's interface is represented by a simple window that has a clean layout. Here you can create a movie from scratch by setting its name, background color, and size (e.g.,For the web, CD or blog, iPhone.

You can also record the screen (screenshots, full-motion recording), which is especially useful if you create a tutorial video and publish it on YouTube.You can also import images (e.g.,GIF, JPG. JPEG. PNG. BMP. You can also add videos (e.g.,The program provides load samples and AVI, ASF.

You can save your projects to make them easier to modify or export to Flash, H264 HTML5, HTML5, Flash, HTML5, AVI WMV, MP4, WebM, HTML6, HTML, images, images, images, DOC, images, or to Flash, HTML5 after the project.You may also be interested in inserting a menu or player into your presentation. This will allow you to set the action that will be activated after playback (e.g.,Stop, Loop, Close URL), undo, and redo your actions.You can also directly upload the clip to YouTube or convert SWFs into other video types.

Tanida Demo Maker runs on a relatively small amount of CPU and system memory. It has a fast response time, creates movies quickly, and includes a help file.We did not experience any issues during our evaluation. The tool did not crash, hang or display error messages.Tanida Demo Maker provides users with an easy environment to create multipurpose interactive presentations and video tutorials.

You can capture all the activities from running applications. It also comes with many tools for editing the recorded material. You can add narration tracks, background music, visual effects, and comments to enhance the effectiveness of your presentation. Demo Builder allows you to interact with your viewer in a new way. Users can click buttons embedded into the movie and control its behavior, answer questions, quizzes, jump to markers, and much more. Demo Builder can record running applications and allows you to auto-record actions. It also records your screen with screenshots that are based on the actions taken. You can also create tutorials and demonstrations from a collection of images or videos. You can export your movie in many video formats, including HTML5, Flash(SWF), Flash(MP4), Standalone(EXE), Flash(SWF), Flash(MP4), Flash[SWF], Video(MP4,WMV.WEBM.AVI], Image Files, Word(Handouts), and save to your local disk, FTP server, or upload to Youtube. DropBox. Google Drive, SkyDrive. The Demo Builder's unique features include 3D support, which allows you to rotate your movie or objects, as well as the ability to sketch your own animations and use audio editing tools. You can now easily animated a character to present your movie with various gestures, movements, and speech tools.

Tanida Demo Builder: Great Features

Make Movies

- Demo Builder's screen recorder is easy to use and can capture any window, selected area, or the entire screen in high-quality video.

- Demo Builder can be used to assemble materials from your movie. You can import a sequence of images or use existing video files.

Virtual Characters can bring your Demos to life

- Demo Builder's new Character feature can grab viewers' attention. With the Auto-Animate function, you can also reduce

your work time on a Character.

- Your Character should be able to talk, greet, and give explanations throughout your movie. This will make your movie come alive with complex eye and head movements.

Amazing Dynamic 3D Effects

- Combining the flexibility of a camera and digital movie creation, this feature allows you to angle your movie on the Z, X, and Y-axis as if you were shooting it from different angles.

- Zoom-n-Pan allows you to zoom in on specific areas to draw the viewer's eye and display specific details.

Direct your movie

- You can use the timeline to keep track of your movie. It allows you to change the timing and sequence of scenes and objects and even decide when and how long they will appear onscreen.

- Your viewer can control the basic playback options, including Play, Pause and Stop, Fast Forward, Rewind, and Rewind.

- You can choose how your movie loads and what actions you should take when it ends.

- If you are in a rush, the Auto functions can be used to annotate or even animate a Character based on computer actions you made during a screen recording.

Make your Movies Editable

- Demos can be used to show the actions, entries click clearly, and clicks that your viewers need to follow. You can either use auto-capture or add Cursor motion objects.

- These great objects can be used to explain your demo or guide your viewers through the actions they should take.

- A brightly colored, moving signal directed at a specific area is the best way to draw attention to a viewer.

- Zoom Area displays the actual background activity in real-time instead of displaying static images.

- You can block any personal or confidential information captured during recording (e.g., Email addresses, names, etc. (

Interactive Movies

- Viewers' reactions and actions determine the demo's next steps (e.g., Continue, pause, skip to a different scene, etc. Continue reading.

- You can decide what next based on the information the viewer has entered in the Edit Zone.

Advanced Audio Features

- You can add audio narration to your screen using your computer microphone.

- This option allows you to record a narration during playback of your movie while editing it.

- The Built-in Audio Editor allows you to adjust the volume, insert silences and edit mistakes. You can also add external audio files to your presentation.

Publish and share

- You can export your movie as an H264, Flash, or sequence of images for the best compatibility.
