Blender Market - FluidLab:

FluidLab, a new add-on for RBDLab Studio, enables realistic fluid simulations directly in the viewport without requiring a domain or invisible baking.

It supports interactions between emitters with varying densities, viscosities, and behaviors, allowing for diverse fluid effects, including sand and mud.

Optimized for small and medium-scale fluids, FluidLab offers presets, custom shaders for different fluids, and easy export via Alembic.

Utilizing Blender's SPH system and Geometry Nodes, it enhances fluid appearance and integrates seamlessly with RBDLab for dynamic simulations like breaking a glass of wine or shattering a metal can with liquid inside.
