Raztrend – CMYK Quadtones LUTs: Quadtones were initially developed to expand the tonal range of images or frames. These Quadtones are graded with four colours: Cyan, Magenta, Yellow, and Black, using Transfer curves, Complementary colours, and Color trends. This creates sleek, enhanced monochrome looks for your photos and footage.

LUTs (Look Up Tables) can be used across various photography and videography projects, including portraits, weddings, landscapes, and more. They can colourize black and white photos, enhance music albums and book covers, add atmosphere to footage, grade film scenes, and much more.

In Adobe Photoshop (CS6 and later), you can work directly on 8- and 16-bit images with these Quadtones. The package includes 40 3DLUT .cube files in Large (for video) and Medium (for Photoshop CS6 - CC variants) grids. Other compatible image software includes Affinity Photo, Skylum Luminar, ON1, Athentech Perfectly Clear v3 and later, 3D LUT Creator, Adobe After Effects, Adobe Premiere Pro, Apple Final Cut Pro X, ON1 Photo RAW 2018.5 and later, Avid Media Composer, DaVinci Resolve, Sony Vegas, ACDSee Photo Studio Ultimate 2019 and later, and Alien Skin Exposure X4.5 and later.

In the package, you'll also find a guide on installing and using LUTs (.pdf). These LUTs are compatible with Mac, Linux, and PC systems, offering versatility and ease of use across different platforms. Elevate your photography and videography projects with the rich tones and artistic enhancements these Quadtones LUTs provide.
