

## RapidTools Octopus v3.6 for 3ds Max Upto 2024

2025-02-10 17:08:58   [label](#)   [我要反馈](#)   [下载页面](#)

**RapidTools Octopus v3.6 for 3ds Max Upto 2024:** Octopus provides many options! It isn't just a circular menu but also a scriptable framework. You're presented with various options to design the menus of your choice and then distribute them effortlessly. The entire OCTOPUS framework can be customized with the max script, and you can customize the behavior to suit your requirements.

Additionally, with the settings panel, you can alter the overall behaviors of Octopus. In this panel, you can specify the time interval that will be elapsed between Single Action and Rotary action modes. You can also set an Octopus Flash delay time, the threshold for repeating an action you have already performed.

Customization is not just about the function of the buttons but also the appearance and feel. You can choose whether to use Octopus by pressing and holding it or if you want to hit the hotkey to start Octopus.

If you're not satisfied to satisfy you, you can turn on or disable animation. You can change the background and border color, shadow/lighting, as well as the color of the text. In addition, you can define the duration of the animation and set the full mouse effect, highlighted on the buttons.

The third version of Octopus sounds like a significant upgrade! The refactored Save/Load system with backward compatibility relieves users, ensuring a smooth transition while benefiting from the optimizations. Performance boosts are always welcome, and it's great that you've added more customization options for users to tailor Octopus to their preferences.

Including anti-aliasing control and Font Quality Settings shows attention to detail for achieving a polished look in the user interface. Refactoring the Copy/Paste System and fixing incorrectly working functionalities will undoubtedly enhance the overall user experience.

The refactored settings panel and 3dsmax 2024 support indicate your commitment to keeping Octopus up-to-date with the latest software versions. It's lovely to hear that the documentation is complete, accompanied by tutorials that make it easy for users to dive into Maxscript and extend Octopus effortlessly.

The plans to extend the Octopus Menu with an additional panel and the consideration of hit testing demonstrate a forward-thinking approach to addressing user feedback and evolving the tool to meet user needs. This update sounds like Octopus is becoming even more user-friendly and feature-rich!

### Octopus 3Ds Max System needs:

- Supported OS: Windows 7/8/10/11
  - 64 bit Intel(r) or AMD(r) multi-core processor equipped with SSE4.2 . instruction set
  - Memory (RAM): 8 GB Recommended: 16 GB
  - Hard disk space 1 GB free disk space available for installation
- 
- Octopus Manager is the main settings panel in the Octopus Menu System. You can customize and access every component of Octopus through this page. Command Editor, Octopus Settings, and Action Browser. Each menu lets you make unique presets that can help you work faster than it was before.
  - It is here that all the magic takes place! Everything you can accomplish with Octopus originates from this area. Here is where you communicate with Octopus what, how, and when to do. Of course, Octopus has the same language as 3dsmax. If you'd like to connect with Octopus, you only need to know a few basics about Maxscript. Most of the time, just two words will suffice... To comprehend the concept more, look at all the menus available to help you!
  - There are several options to define, for instance, Auto Scene Redraw, mouse sensitivities, the default value, range of rotation, and Preview/Hover mode makes single-actions further since you don't need to click on your buttons; drag the pointer across

your buttons.

- The action browser is the hub of all single actions that Octopus recognizes. Each of these actions is available in the Hotkey Editor in 3dsmax. Nearly all the actions you will find here are also available to Octopus. Drag or drop an action on the Command Editor or the Button Button itself.
- Installing Octopus is the primary screen for all that Octopus can accomplish. You can set up the design and appearance you want to see in your Octopus menu, and it's also where you tell Octopus what to do. Here, you can toggle or deactivate Hold and Release. Or you can configure Last Repeat, called Octopus Flash.
- Chronos is an experiment in the Macro Recording system that can be helpful when doing repetitive tasks. The Chronos system includes reusable code you can share with other Octopus users. This program's primary benefit is that it includes the code needed and recorded parameter values you wish to repeat an action in the future.
