

AeScripts – Fog v1.6.2 (Win, Mac)

2025-02-10 17:05:27 [label](#) [我要反馈](#) [下载页面](#)

This plug-in is intended for users with a lot of power who want to light scenes, create animations, photographs and generate mood or particle effects.

Fog is the visual element that provides visual distance clues in images. The addition of fog, mist, and diffusion in a flash is an efficient way to speed up VFX and color grading that is creative. It is possible to fake depth for a 2D layer with the depth map.

For the majority of 2D images, it's not easy to make a depth map. Some fog plug-ins also create the form of fog with a few modifications. It's impossible to create scattering, diffusion dispersion, mist, various densities, and bloom. Prosy Fog does not require the use of a 3D comp. It has an algorithm that determines the depth of your scene. It doesn't require creation by the user.

In conclusion, Other fog plugins may create the look that the fog takes. Prosy Fog offers the fog's form, shape, diffusion scattering, dispersion fog, adjustable density, and glow and blink for a total illusion. Additionally, Prosy Fog will work with any 2D video or photograph. It is available on Both Premiere Pro and After Effects.

The fog comes in many forms that make up a noise-based form as well as diffusion (the diminution in the transparency of the object) and scattering (for example, different color fog of shadow and light regions) as well as light dispersion (different hue fogs based on the direction of view to the source of light) as well as fog (the reduction in chromaticity of dark regions) and different density (different areas of the landscape could have different levels of fog) and bloom (the light scattering effect that occurs near blow-out areas).

Value Proposition

Adjustment Layers are added above the layers you wish to render Add the Fog plugin and create instant fog.

1. Very speedy (uses the entire core) and very easy to use.
2. A vast selection of presets can be used for various shades and light colors as well as fog-related behavior.
3. Variation in fog can create unique animations and shapes for fog.

Compatibility

After Effects and Premiere Pro Creative Cloud. Tested using CC 2017 CC 2018 CC 2020, 2021. macOS 10.12 and above or Windows 7 and above.

The version is new in v1.6.2:

- Improvements in x,y response of A camera
