Delphi　　Components　　VCL
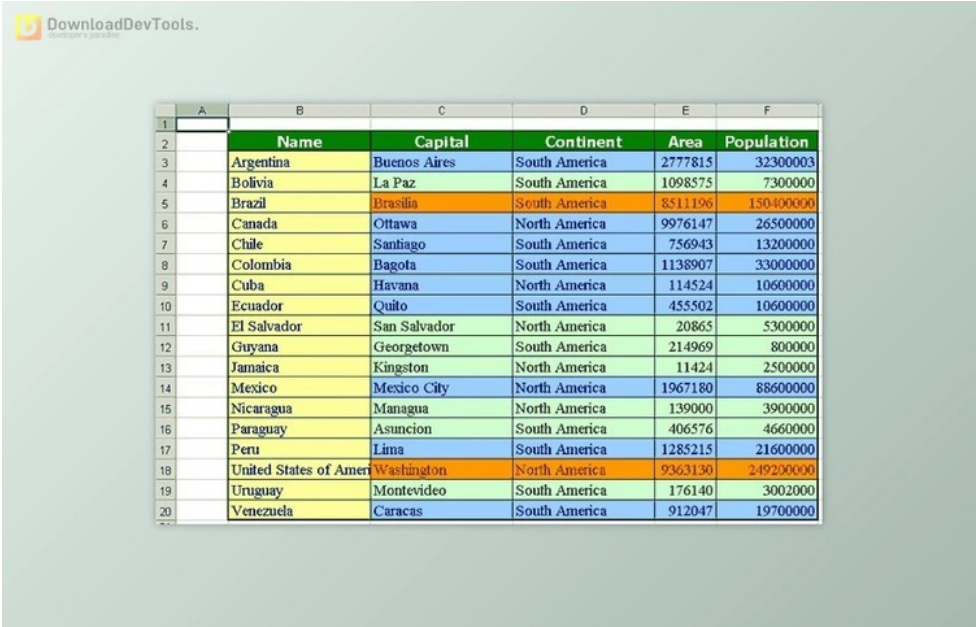

NativeExcel is a premier solution tailored for Delphi Developers, providing robust capabilities for creating and reading Excel spreadsheets within their applications. With a focus on high performance and a convenient object model, this suite offers comprehensive features to streamline Excel-related tasks. It boasts support for all Excel formatting options while eliminating the need for Microsoft Office, thanks to its pure Delphi source code.

This suite excels in flexibility and functionality, allowing users to open existing Excel files, access and manipulate cell values, and leverage a powerful calculation engine for computations. offers extensive control over cell and font attributes and supports various image formats. Features like merged cells, Unicode characters support, and hyperlinks are seamlessly integrated to enhance user experience.

Furthermore, **NativeExcel** empowers developers with tools for managing worksheets, including grouping rows and columns and configuring printing attributes for customized output. It also caters to advanced needs such as reading password-protected Excel files and exporting workbooks and worksheets to formats like HTML, RTF, CSV, and TSV. With specialized components like TDataset2Excel and TDBGrid2Excel, populating spreadsheets becomes effortless, further enriching the suite's utility for Delphi Developers.

Key Features of **NativeExcel** :

1. High performance
2. Convenient object model
3. Support for all Excel formatting options
4. No dependency on Microsoft Office
5. Pure Delphi source code
6. Complete documentation with numerous examples
7. Open existing Excel files

8. Access cell values (number, string, date, boolean, formula)
9. Calculation engine for computations
10. Cell attributes customization (alignment, comments, borders, etc.)
11. Font attribute customization (font name, size, color, etc.)
12. Support for images (bmp, jpg, png, emf, wmf)
13. Merged cells
14. Unicode characters support
15. Range of cells operations (copy, move, delete, insert)
16. Grouping of rows and columns
17. Hyperlinks support
18. Worksheet attributes manipulation (name, protection)
19. Printing attributes customization (page size, orientation, margins, etc.)
20. Reading of password-protected Excel files
21. Exporting workbooks and worksheets to HTML, RTF, CSV, and TSV files
22. TDataset2Excel component for populating spreadsheets from TDataset descendants
23. TDBGrid2Excel component for populating spreadsheets from TDBGrid descendants
