ForkLift v4.6.3 for macOS

2026-06-14 17:02:27

ForkLift is a robust dual-pane file manager and transfer client designed with users of the macOS in mind as it offers additional control, speed, and flexibility than Finder can provide. Its simple interface and powerful features allow it to allow you to easily browse, copy, move and organize files on-site and on the remote servers, all under one roof.

It is compatible with a very broad spectrum of connections such as SFTP, FTP, WebDAV, Amazon S3, Google Drive, OneDrive, and dropbox among others. You can control several servers simultaneously, to compare and synchronize folders, preview media files, and monitor all activities in real time. ForkLift takes care of all that is well arranged and effective either in personal files or professional work.

In addition to a basic file management system, **ForkLift** is also loaded with intelligent features, such as Git and terminal support, iCloud, cleaning up of apps, and gorgeous custom themes. It is made to help you get through your workflow quicker, cleaner, and to enjoy your task - the best upgrade anyone who handles files daily can have.

Key Features of **ForkLift** :
