Produce Variations of the After Effects comps with a spreadsheet

Automated Versioning Your Comps

CompsFromSpreadsheet Lets You quickly produce copies of Your After Effects compositions, upgrading the new comps with information from a recorder used to add text and substitute layers.

The script has been used by NBC, HBO, Disney, and tens of thousands of others.

- The interface shifted to accommodate spreadsheets that have many columns.
- Double quotations seemingly find mangled by glow once you convert to tab-delimited text. Now in the Event That You put in your spreadsheet, the script will automatically convert it into"
- picture sequence, just the first frame would arrive in.
- Now you can import a picture sequence by appending a * rather than in the domain. Previously if you attempted to import a picture sequence, just the first frame would arrive in.
- Fixed"reverse group mismatch" bug.
- Fixed issues with conserving render into an image sequence along with other difficulties with render configurations.
- Layers replaced with compositions can get information in the dictionary
- Ability to specify the export directory
- Composition length could be corrected based on layers span
- Output Module and Render Settings may be set in the spreadsheet
- Various bug fixes and Minor capabilities
