What is 16mm Fuji LUT?

A 16mm Fuji LUT (Look-Up Table) is a specific color grading preset or filter designed to replicate the color and tonal characteristics of a 16mm film stock produced by FujiFilm. LUTs are used in video and photo editing software to apply a consistent and predefined color grade to digital footage or images, helping to achieve a particular aesthetic or mood. In this case, the "16mm Fuji LUT" aims to emulate the distinctive look of 16mm film shot on FujiFilm stock.
