The Microsoft Visual Studio 2013 is the next level and generation of the IDE for the developers of the platforms such as the Microsoft applications. To run the visual studio 2013 on the systems, the users should have the Windows 7 version or installed it later and it is much preferable to do it with the 4GB of RAM at least. For the purpose of downloading the Microsoft visual studio, the users can visit the Visual Studio Download page.

### Visual Studio 2013 Ultimate License Key:

BWG7X-J98B3-W34RT-33B3R-JVYW9

### Visual Studio 2013 Premium License Key:

FBJVC-3CMTX-D8DVP-RTQCT-92494

### Visual Studio 2013 Professional License Key:

XDM3T-W3T3V-MGJWK-8BFVD-GVPKY

The visual study 2013 provides enhanced navigations which are very great and it enhances the features that include the Auto Code Editor Window. It is good to know that the Microsoft Visual Studio includes templates in it which allows the users to create applications for the Windows Store and windows 8.1and also it helps in the maintenance of the existing windows 8 app store. Several performances have been introduced by Microsoft like the optimization, debugging improvements, and a few more. With the help and support of Visual studio 2013 now there is support for the Typescript and Microsoft has been expanded as well. Once the Visual studio 2013 is downloaded now the user can start the process of installation right after the mounting of the ISO file and the unzipping of the file of the ISO that the user had downloaded.

### Microsoft Visual Studio 2013 Great Features:

**IDE Enhancements:** There are several things present but what you will see first is the about the new release of the upgrades provided into the IDE. As a response to the complaints that were regarding the beige as well as the IDE from the visual studio 2012. Microsoft had altered more than 400 icons, the use of different colors, and also intending the differentiation supply. Later, the visual studio 2013 started the webpage and it was redesigned.

**New Productivity Features:** As included by Microsoft, there are several productivity features and characteristics that are very unique. In the features we can include the ability and power to maneuver the blocks and the lines of the codes and the keyboard shortcuts, then the enhanced conclusion mount, and last but not least the tabbed navigation capacities.

**New Peek Definition Feature:** The new peek definition is an attribute that offers the users more insight into the codes provided. Without even departing from the context of the code of the user from the IDE the user can see many definitions regarding the system. To be able to look at the definition of the method, the user should place the cursor and later press the Alt+F12. This definition will appear in a read-only window or the user can place it there.

**New CodeLens Feature:** CodeLens is another enhancement of productivity and it is also known as the Code Information Indicator. It was initially introduced in the year 2013 at the TechEd at the New Orleans. These attributes offer details and it is possible to view all the attributes by the user and their details such as the test functions, outcomes as well as methods.

**Support for Building Office 365 Software:** Another new feature in the Microsoft Visual Studio 2013 is mainly a great service for the construction of the software of office 365. Office 365 is a cloud business app that operates in nowhere but the platform of the Windows Azure cloud.

**New TypeScript Feature:** The typed script is a programming language that has the support of the courses, modules, and other ports that are easily compiled down to the great JavaScript and it allows them to operate and function on almost all browsers. There is only a supply-based account of navigation which is symbol-based and allows abundant assessing, code refactoring, statement completion, and other things like the typescript which was made to deliver all the capacities of the developments.

**Team Development Enhancements:** To facilitate the development of the groups, the visual studio 2013 has included updates in it and has upgraded the Team Explorer that is responsible to offer an improved Home page which is more clear and even straightforward in the features like the navigations and collaborations. The undocking can be done with the team explorers and the new features here include the support of the Git variation and so on.
