Blender Market – Blendbricks v2.2: BlendBricks is the group of nodes that supports Blender Cycles that provides 3D artists by providing an easy-to-use yet authentic ABS PBR material specially designed to be used with LEGO(r)-like models, bricks, and pieces of all kinds. It also lets users transform an existing model into a brick-built with the included Geometry Nodes mod.

Some of the showcased renders utilize LEGO(r) meshes made by Mecabricks that aren't included in the software.

LEGO(r) is a trademark belonging to LEGO, a LEGO Group member of companies not associated with, sponsor, or endorse this product.

- Highly precise BlendBricks Material, including fingerprints, scratches, grease IOR variants, variation in roughness subsurface scattering, and more. It can also be used with solid, transparent, or metallic brick decoration (paint), normal maps (for additional details like cracks, mold lines, etc.), weathering bevel edge wear, and more. It comes with the most straightforward set-up and an upgraded (but more robust) configuration.
- Modifier for Geometry to Bricks - transform almost any object into LEGO(r) in a matter of minutes and preserve its original color
- Two bricks are included that come comes with HD and SD variants.
- It comes with a realistic Dust Generator for free and can be used with BlendBricks to add a second dimension of authenticity to the scene.
- Includes the Palette node group that gives you easy access to all the familiar LEGO(r) colors
