What is the Extrude Keep Subdiv ZBrush Plugin?

ZBrush plugins serve as supplementary software components that enhance the capabilities of the primary application. Frequently developed by third-party creators or the ZBrush community, these plugins introduce new tools, and features, or streamline specific workflows within ZBrush.

Should "Extrude Keep Subdiv" be a ZBrush plugin, it likely functions as a tool crafted for extruding geometry while maintaining the integrity of subdivision levels. This functionality proves valuable for artists engaged in intricate model detailing with multiple subdivision levels, enabling them to make adjustments without compromising the finer nuances of their work.
