is a comprehensive course for mastering JavaScript for web development. With JavaScript being the dominant language in web programming, boasting a vast community of over 12 million developers and powering 97% of websites, proficiency in this language is crucial. Throughout the course, participants learn key skills such as project planning, layout and style creation using HTML and CSS, and dynamic functionality implementation with JavaScript.

Participants begin by meticulously planning and setting up their web application projects, ensuring a solid foundation for subsequent development stages. They then delve into building layout styles and implementing CRUD operations using HTML and CSS, vital for creating visually appealing and user-friendly interfaces. The course then focuses on JavaScript, empowering learners to develop dynamic functionalities, from interactive features to data manipulation.

Finally, participants mastered publishing their web applications, ensuring widespread accessibility to global audiences. By **Building a Web Application with JavaScript - Steve Buchanan**'s end, learners can transform their ideas into fully functional web applications, ready to captivate and engage users worldwide.

Building a Web Application with JavaScript Table of contents:

1. Course Overview (Duration: 1 minute)
2. Planning Your App and Setting Up the Project (Duration: 18 minutes)
3. Building the Layout, Style, and CRUD for Your App with HTML and CSS (Duration: 28 minutes)
4. Coding Your App's Functionality in JavaScript (Duration: 27 minutes)
5. Publishing Your App (Duration: 37 minutes)
