Aescripts Pseudo Effect Maker v3.1.1

2025-02-10 16:43:02　　label 我要反馈　　下载页面

The **Pseudo** Effect Maker provides an Easy, User-friendly interface that lets you rapidly and easily create, arrange, and employ custom effect controllers. These controllers can then be utilized to push layers and expressions inside your After Effects project and be stored as presets so you can easily reuse them or so others may use the tools you produce.

- Replace the control you have selected with the current control to update without losing keyframes and expressions in your pseudo-effect
- A brand new interface that provides a more effortless, more organized user experience
- Performance improvements in drag and drop
- An easier-to-customize user interface allows you to access the features you frequently use quickly.
- More accurate warnings and errors aid in identifying issues or conflicts in your fake effect before you begin working on it.

- fix bugs with negative defaults on point controls
- fix an issue where auto-save and preferences may not save successfully
- update licensing framework

- A pseudo impact can be called a custom expression controller: " After Effects has many expression controllers built-in, but they're all independently separated. This implies that in case you want to use numerous controllers for your project, each will need to be added individually, which could quickly become cluttered and unorganized.
- A synergistic impact lets you make a personalized set of controllers that may be organized and named however you need. Create; you're saying controls are easier to utilize and seem more constructed in effects.
