

## AsyncPro for VCL v2024.02 (13 Feb 2024) for Delphi 10-12 Athens Full Source

2025-01-02 17:21:47    [label 我要反馈](#)    [下载页面](#)

is a powerful communication library for developers working with Embarcadero Delphi and C++Builder. It allows you to access serial ports, TAPI (telephony APIs), and Microsoft Speech API, making it easy to create applications with features like faxing, terminal emulators, VoIP, and more. Whether you're building robust communication tools or simple utilities, AsyncPro provides a solid foundation.

This toolkit is a source-only version, meaning you get full access to the code for design-time and runtime components. It supports Delphi and C++Builder applications targeting the Win32 platform, with experimental support for Win64. AsyncPro's flexibility and range of features make it an ideal choice for developers needing advanced communication capabilities.

For ease of integration, **AsyncPro for VCL** comes with separate runtime and design-time packages for both Delphi and C++Builder. This structure ensures a smooth development experience and compatibility with the tools you're already using.

### Key Features of AsyncPro for VCL :

- Serial Port Communication:** Enables easy data transfer with serial devices.
- TAPI Integration:** Supports telephony tasks like phone calls and modem control.
- Microsoft Speech API Support:** Adds speech recognition and text-to-speech functionality.
- Faxing Support:** Allows sending faxes directly from your application.
- Terminal Emulator:** Creates interfaces for monitoring and controlling serial devices.
- VoIP Integration:** Adds Voice-over-IP features for modern communication.
- Win32 and Win64 Support:** Fully supports Win32 with experimental support for Win64.
