the user can click on file objects i.e., views, tables, etc., to begin recovering data from the tables, views, and views to start recovering data. Data previews will appear on the right-hand side of the webpage.

- The SQL Server compression support is now available.

SQL Database Recovery Software SQL Database Recovery Software can provide all the significant compressions for SQL tables in databases. Row-level compression level PAGE compression as well, as Unicode compression are provided by this tool to help recover all data in its original format.

- Save the file as SQL Database.

It is possible to save saved data to a brand newly created SQL Server database file by providing the database and server information and then selecting the authentication method, i.e., the option to use Windows and SQL Server.

- Save the file as SQL Scripts.

Another option for saving allows users to save their deleted data in the form of SQL Scripts at a user-defined location. It permits making SQL Scripts highly compatible with newer and earlier versions of SQL Server.

- Authentication Modes

Suppose the user wants to save the deleted data in the form of an SQL Database file. In that case, they should choose the authentication mode they would like to use for their new data files, such as Windows Authentication or Server Authentication. When using server authentication, the users must enter the login and password.

- Exporting Features

The unique exporting function helps users export their schema and data according to specifications. The Export with Schema and Data option exports schema and data from the table, while the Export with only schema option only creates schema for the selected tables/views/procedures.
