

## Edraw Office Viewer Component v8.0.0.712 ActiveX CRACKED

2024-12-29 08:47:45   [label](#)   [我要反馈](#)   [下载页面](#)

Edraw Office Viewer Component is a standard ActiveX control. It acts as an ActiveX container to host Office documents (including Microsoft Word and Excel documents, PowerPoint, Project, and Microsoft Visio documents) in a custom page or form. This control is lightweight and flexible, and developers have new options for using Office in their own way.

Developers can program and embed the Microsoft Office environment using the Office component. This allows for new possibilities in solution integration. It is possible to integrate the power of MS Office into any smart client or web application. Office Control is easily integrated with the host app's UI, so developers can use MS Office functionality in their applications without developing similar functionality. You can also control the MS Office programming interface, which allows you to programmatically control the feature and add objects or members to it in the office object modeling.

The Office Viewer Component was designed to make it easier to use ActiveX documents from non-top-level windows. This component can be used to build your own embedded object viewer or editor as an ActiveX control.

This is an excellent solution for companies that want to show editable Word documents, Excel sheets, and PowerPoint slideshows to employees. However, it does not allow them to modify the underlying data. PowerPoint files can be played in the same window. It is possible to display password-protected Word documents in the same window. It is simple to upload and download files from server to client via HTTP/FTP with the office component.

## Edraw Office Viewer Part Great Features

- 100% compatibility with MS Office file formats
- Multiple office instances supported. Implemented an "exclusive" office feature. The component window can be closed if any word or excel documents are opened outside the component.
- Uses office automation mode to interact with MS Office. Developers can easily customize office applications using the GetApplication interface.
- Full edit mode and protect mode for MS Word & Excel. Disable hotkeys. Disable Right-click menu. Disable toolbars.
- Ready for 32/64bit Windows 2000/XP/2003/2008/Vista/7/8 platforms
- Compatible with IE 6/7/8/9/10 and Mozilla Firefox
- Integration seamless with Office 2000, XP 2003, 2007, 2010, and 2013 32/64 bit
- Protect your confidential data with password-protected Word documents.
- It is easier to open files locally or stream files on a server. It is simple to upload and download files via HTTP/FTP with the office OCX.
- Support for more file types All document formats that Microsoft Word, Excel PowerPoint, Visio, and Project support can be opened.
- Securer. SiteLock allows ActiveX control developers to limit ActiveX control to a predetermined set of domain names and security zones.
- Stabler. Edraw Office Viewer Component currently runs in more than 100 Fortune 1000 companies in 40 countries.
- There were many examples: C# and Asp.net, C++, Access, WPF, Access, and Delphi.
- Multilingual Support. It is easy to modify the interface during run-time or design-time.
