**Aescripts Set Path Keyframes v1.0 (Win, Mac):** Don't waste your time constantly switching down Shape property properties on your timeline to add Path keyframes. Make them available instantly by using the shortcut.

This plugin expands the functionality of Shape Layers to allow users to easily Add or remove Keyframes of all the Path Properties at the time of the indicator.

Each Transform property has an in-built keyboard shortcut (P, A, R, and S). It is easy to set the Keyframes in the timeline's position using +P, Scale keyframes using +S, and even mask Path keyframes by pressing +M. However, Path features in the Shape Layers were missing...until today!

**Installation:**

- The most straightforward method of installing is to use the rescripts and plugins manager application

**Manually install:**

- Windows: Move Set Path Keyframes. aex to C:\Program Files\Adobe\Common\Plug-ins\7.0\MediaCore
- Mac: Move Set Path Keyframes. Plugin to /Library/Application Support/Adobe/Common/Plugins/7.0/MediaCore

- Create new keyframes for each of the Path properties on the layers you select at the moment.
- If all the Path properties currently contain keyframes, then eliminate those keyframes.
- Map to any Keyboard Shortcut (ex: CTRL + ALT + Qor + Q)
